

Servicing the ASA A1K System

Delivery: Web-based training (WBT)

Duration: 60 minutes

Course Description

Explore the technical specifications and features of the NetApp® All SAN Array (ASA) A1K system. Locate and identify the key components of the system and examine the procedures for replacing the field replaceable units (FRUs).

Role

Support engineer, implementation engineer, and professional services

Objectives

This course focuses on enabling you to do the following:

- Understand the technical features of the ASA A1K system
- Locate and identify the system components
- Replace components such as batteries, adapters, electronic modules, and media

Course Content

This course includes the following topics and lessons:

| Topics | Lessons |
|------------------------------------|---|
| Identify the ASA A1K system | <ul style="list-style-type: none">Review the technical and physical specifications of the ASA A1K systemIdentify the key components of the ASA A1K systemIdentify the ASA A1K FRUs and their physical locations |
| Replace a boot media device | Follow steps to replace and restore a boot media device for an ASA A1K storage system |
| Replace a controller module | Follow steps to replace a controller module for an ASA A1K storage system |
| Replace a DIMM | Follow steps to replace a DIMM in the controller module for an ASA A1K storage system |
| Replace a fan | Follow steps to replace a fan in the controller module for an ASA A1K storage system |
| Replace an NVRAM module | Follow steps to replace an NVRAM module for an ASA A1K storage system |
| Replace an NV battery | Follow steps to replace an NV battery for an ASA A1K storage system |
| Add or replace an I/O module | Follow steps to add or replace an I/O module to an ASA A1K storage system |
| Replace the power supply | Follow steps to replace the power supply for an ASA A1K storage system |
| Replace an RTC battery | Follow steps to replace an RTC battery in the controller module for an ASA A1K storage system |
| Replace a system management module | Follow steps to replace a system management module for an ASA A1K storage system |
