

NETAPP UNIVERSITY

Data ONTAP 7-Mode Fundamentals

COURSE DESCRIPTION

The Data ONTAP® 7-Mode Fundamentals course is for anyone who performs basic support and administrative functions on a NetApp storage system that runs the Data ONTAP 7-Mode operating system. This course supports Data ONTAP 7.3 through Data ONTAP 8.2, the next-generation data storage operating system from NetApp®. Through scenario-based lectures and demonstrations, you learn the features and functions of 7-Mode and perform basic system administration tasks to manage and protect data on a NetApp storage system.

DELIVERY TYPE

Web-based Training (WBT)

DURATION

6 hours

AUDIENCE

This course is intended for everyone.

TRAINING UNITS

None

PREREQUISITES

None

OBJECTIVES

By the end of this course, you should be able to:

- Explain the basic features and functions of the Data ONTAP 7-Mode operating system
- Describe how the WAFL® (Write Anywhere File Layout) file system processes read and write requests
- Identify basic hardware components, such as storage controllers, storage shelves, and network switches
- Connect to a NetApp storage system using NetApp OnCommand™ System Manager and the command-line interface
- Perform basic system administration tasks to manage and protect data
- Use message logging and NetApp support features to maintain a NetApp storage system
